

EDSCO PRO-SERIES® LOW PROFILE GATE

The EDSCO Pro-Series® Low Profile Gate provides everything you need to deliver your product time and time again. Single-handle operation makes it easy for one operator to control product flow for fast, efficient unloading. The EDSCO™ family of outlet gates offer high product integrity, low maintenance requirements, and proven performance.

TrinityRail® is one of North America's leading providers of railcar parts, giving you a single, reliable resource for almost any type of railcar. We are committed to providing exceptional customer service, quality parts, and on-time delivery.

AT A GLANCE:

- Clean bore, no-ledge design delivers a material flow that's free of obstructions
- The slope sheets from the bolt flange provide a 19° degree slope and increases to 30° degrees near the center of the gate.
- A stiffer, more rigid flange design reduces gaps to eliminate pellet entrapment
- Valve design provides dual operating modes for unloading and clean out, eliminating unintentional clean out
- Interchangeable and compatible parts with other EDSCO models reduces your inventory
- Enclosed operating mechanism prevents rod damage and corrosion
- New valve rod design eliminates the need for the center support.
- One-piece valve rod decreases deflection to protect against product contamination
- Under pan valve requires less torque when operating
- One-piece adapter gasket requires only one person for gate tear down
