TO KEEP YOUR RAILCARS IN SERVICE AND MOVING, *TRINITYRAIL*® PARTS & COMPONENTS OFFERS SUPPORT BUILT AROUND REAL-WORLD RAILCAR LIFECYCLE NEEDS.

For railcar owners and repair facilities, maintenance delays often have less to do with the repair itself and more to do with getting the right parts at the right time. Unexpected discoverables, obsolete components, inventory shortages, and lengthy lead times can extend shop turns, disrupt schedules, and keep railcars out of service longer than planned.

THE MOST EXPENSIVE PART IS OFTEN NOT THE ONE WITH THE HIGHEST CATALOG PRICE. IT'S THE ONE THAT TAKES LONGEST TO ARRIVE.

TrinityRail Parts & Components helps customers reduce delays by combining extensive parts availability, deep railcar expertise, and responsive, reliable support.

As part of a company that manages more than 140,000 railcars, we understand the operational impact of downtime and the importance of accurate, dependable parts fulfillment.

- More than 27,000 supported part SKUs and approximately 262,000 engineering drawings
- Solutions for legacy and hard-to-source components
- Custom fabrication of proprietary and non-catalog parts to OEM tolerances at Maintenance Plant 192
- Consignment Program and Kitting Service available
- Quality verification throughout fulfillment process
- Dedicated rail industry expertise and responsive customer service

Whether you need routine replacement parts, support for legacy railcars, fabricated components, or maintenance program solutions, our team is focused on helping you keep your railcars moving.

CONSIGNMENT PROGRAM

THE PARTS YOU NEED, WHERE YOU NEED THEM.

Maintaining the right inventory levels can be a constant balancing act. Too little inventory increases the risk of delays and emergency orders. Too much inventory ties up capital, consumes valuable space, and increases carrying costs.

TrinityRail's Consignment Program helps eliminate that tradeoff. We work with customers to establish stocking strategies based on actual usage patterns, monitor inventory levels, and replenish parts before shortages occur.

Benefits of Consignment

- Improved parts availability for scheduled and unscheduled repairs
- Reduced inventory management burden
- Lower risk of stockouts and expedited shipments
- Better visibility into parts consumption
- Increased confidence that critical components will be available when needed

By helping ensure the right inventory is on hand at the right time, our Consignment Program supports more efficient maintenance operations.

KITTING SERVICE

EVERYTHING NEEDED FOR THE JOB. DELIVERED TOGETHER.

One of the most common causes of maintenance inefficiency is the time spent locating, verifying, and gathering parts after a project begins. Even when parts are available, technicians can lose valuable time assembling the materials required for a repair.

TrinityRail's Kitting Service streamlines the process by delivering complete, project-specific kits directly to the repair facility. Working from the bill of materials, our team gathers, inspects, organizes, and packages the required components so everything arrives ready for use.

Benefits of Kitting

- Reduced technician time spent searching for parts
- Fewer picking and fulfillment errors
- Improved shop productivity
- Faster maintenance execution
- More predictable repair schedules

Kitting streamlines the maintenance process, allowing technicians to focus on repairs instead of parts logistics.
